Description

The KFR line of flowmeters deliver accuracy and range availability at a low cost. Bridging the microflow and large flow ranges, it provides an effective solution for many industrial applications. The durable KFR has a one-piece acrylic body with PVC or metal fittings. To eliminate errors in readings, large lettering and extra hash marks make the scale clearly visible. The low flow meters offer an inherently stable float design and are also available with integral needle valves. The larger meters feature a float stabilization mechanism that enables a small installation footprint and a low price.
